## ABOUT ME

I'm a front-end developer and software developer with a strong eye for design, clean code, and pixel-perfect execution. I bring digital ideas to life using tools like HTML, CSS, JavaScript, and React. I am proficient in Python, Java, and web development, with hands-on experience in real-world projects. Having good communication skills and leadership qualities always helps me take a perspective and solve problems by delivering high-quality results.

---

---

## TECHNICAL SKILLS

C | Java| PYTHON | My-SQL | HTML | CSS | JS | DSA in C | MS-Excel | Microsoft Office | Project Management | oops

---

## WORK EXPERIENCE

### Web Development Intern | Internpe

July 2024- Aug 2024

- One-month internship at internpe.
  - Build up the projects that are assigned as tasks to us.
  - Used HTML, CSS, and JavaScript to build the specific application.
- 

## PROJECTS

### Travel management application:

Made a travel management system that provides the information to the user regarding the tour packages and manages their tour. I used HTML, CSS, and JavaScript to build the frontend of the application, and for maintaining and storing data, I used SQL queries to establish the perfect backend structure.

### To-Do List Application:

The To-Do List application was made as a task that enables the user to enter their work list and schedule their work.

### Quiz Application:

The quiz application is also part of the task given by the intern while performing the remote internship. The application provides the quiz to the user.

### Student Management System:

Develop the student management system using Python and MS Excel ( to store the student data). The system shows the basic information about the student, including their name, branch, year, and roll no.

---
